ACKNOWLEDGEMENT

We would like to express our gratitude to the data collection team, who has worked in difficult circumstances under time pressure, but yet reached every households in the remote target communities.

We would also like to thank the Gaunpalika and Ward governments and other local stakeholders for their support in enumerator selection, targeting vulnerable groups and logistic support in general.

Special thanks go to all the stakeholders in the community and the respondents of the surveys, who gave up their time to support our team and to ensure that the results of this data collection will be accurate and useful.

We would like to thank DFID / Purnima team and Mott McDonald for giving PHASE Nepal the opportunity to be a partner in the Purnima LNOB programme and support and guidance provided during the evidence phase of the project.

INTRODUCTION

Purnima is a five-year programme funded by the UK Department for International Development (DFID) and managed by Mott MacDonald, which will run until September 2022. Objective of the programme is long-term positive change in the lives of people in earthquake-affected regions of Nepal. The present evidence was gathered to support planning for one element of the Purnima programme: A Challenge Fund to 'leave no-one behind' in the reconstruction effort, and to restore and improve livelihoods, food security and access to services (including housing grants and related support services) for the most vulnerable in the project area. As these vulnerable people have limited coping capacity for external shock and disaster, the Gorkha earthquake may have made them more vulnerable. These groups are characterised by lack of education and technical skills, and they are surviving in poverty thus their health status is also very poor. In addition, they are less likely to have strong social networks. They lack support from family, friends, neighbours and community. The quality of their social relationships is very weak. Therefore, deeper understanding of their social relationships, socio-economic and health status, and respective livelihood improvement opportunities is needed. Lack of formal social protection, and if any, access to it is problematic – because people may be unaware of such protection, or it could be misused by family members, thus advocacy for knowledge and awareness raising is urgently needed.

PHASE Nepal has been awarded a part of the Leave No-One Behind (LNOB) challenge fund to implement activities in four Gaunpalikas (Rural Municipalities) in Gorkha district; Ajirkot, Dharche, Gandaki and Tsum Nubri. The household survey was planned in order to gather reliable and accurate baseline data on the number and characteristics of vulnerable individuals and households (operational definition of vulnerabilities are provided in Appendix) in the target area, as well as information on their current situation regarding inclusion, access to services, earthquake recovery and livelihood security as well as current resilience and coping strategies.

While conducting the baseline study, the Chair of Gandaki Rural Municipality had requested PHASE Nepal to include additional questions in the household survey, so that the municipality can develop its profile later. Responding to this, PHASE Nepal agreed to conduct detailed interviews with each and every households (Census like survey): For each household a "roster" was prepared, detailing the name, gender and age of each household member and asking in each household if any members fell into any of the vulnerable groups. If there were no vulnerable members, the household was not further interviewed. If any vulnerabilities were identified, detailed interviews were conducted with the vulnerable household member when available, or a career/representative.

A structured and semi structured questionnaire was developed for the household survey, based on tools which PHASE had previously used, and including all information required for the project planning, particularly following the operational definitions of each vulnerable group. This included a detailed questionnaire for each household to establish whether the household is ultra-poor; and for each household member meeting any of the vulnerability criteria. Based on the need for Gandaki Gaunpalika, it also included a household census tool and a screening tool to establish whether any household members fell into one of the categories of vulnerability. Pre-testing of the tool was conducted in Ichhakamana Gaunpalika in Chitwan district (nearby Gandaki rural municipality). Pre-testing helped to fine tune the survey tool.

The Nepali language questionnaire was transcribed into the Android-based KoboToolBox software for data collection. A total of 37 enumerators were recruited for data collection.

They were trained for 2.5 days on the survey questionnaire and the methods to collect data in the Kobo software. Answers from individual interviews were entered directly on mobile phone devices and sent in batches to the PHASE office online for cleaning and analysis. Surveys were conducted in March, 2019, and completed within 17 days, with between 3-15 questionnaires per enumerator per day (average around 10).

The use of Android-based Kobotool helped us to quickly access the data. The data collected each day were sent to the PHASE Nepal office in Kathmandu where they were downloaded and checked for consistency and errors. The statistical software SPSS was used for data analysis and data sets transferred into Excel sheets for representation. Results were triangulated with secondary data from Gaunpalikas and wards.

Here, tables are provided.

POPULATION, GENDER, AGE CATEGORY, EDUCATION AND ETHNICITY

Table 1: Number of households and population by Ward

| Ward | Number of households | Population | % female | % male |
|--------------|----------------------|---------------|-------------|-------------|
| 1 | 637 | 3,581 | 49.1 | 50.9 |
| 2 | 862 | 4,779 | 49.2 | 50.8 |
| 3 | 591 | 3,351 | 48.6 | 51.4 |
| 4 | 625 | 3,397 | 49.3 | 50.7 |
| 5 | 819 | 4,730 | 48.9 | 51.1 |
| 6 | 794 | 4,738 | 49.2 | 50.8 |
| 7 | 637 | 3,305 | 50.4 | 49.5 |
| 8 | 798 | 4,264 | 49.6 | 50.4 |
| Total | 5,763 | 32,145 | 49.3 | 50.7 |

Total households 5763, total population 32,145. However, data from 31,204 individuals were analyzed. The survey missed collection of personal information, such as age, gender, etc. from 941 individual. This is because of the limitation of the survey tool (11 members at maximum in KoBo), and error in data collection process (missed a few hh head).

Table 2: Number of individuals 'missed' in the Survey 2019

| Ward | Population | Missed individual |
|--------------|---------------|-------------------|
| 1 | 3411 | 170 |
| 2 | 4676 | 103 |
| 3 | 3209 | 142 |
| 4 | 3309 | 88 |

APPENDIX: Operational definition for vulnerabilities

1. PWDS: PWDs are categorized into following for the purpose of data collection and identifying project beneficiaries for Peoples with Disabilities:

- i. Physical disability
- ii. Visual disability: a) blindness b) low vision c) complete blind
- iii. Hearing disability: a) deaf b) hard of hearing
- iv. Deaf blind
- v. Vocal and Speech
- vi. Autism
- vii. Intellectual disability
- viii. Mental or psychosocial disability
- ix. Hemophilia
- x. Multiple disability

Source: Disability Right Act 2017, GoN

2. Elderly: PHASE Nepal used following definition and criteria provisioned in Civil Code 2074 for the purpose of data collection and project target identification for elderly people.

- Any person aged 60 years and older or who is eligible to receive Government allowance.
- Dalit: any person aged 60 years and older.
- In case of unmarried women, she should be age of 60 to get social security allowance.

Source: Civil Code, 2074 Nepal

3. Single Women: PHASE Nepal has used the definition and criteria of Shelter cluster for the purpose of data collection and project target identification for single women.

Single women were defined as (<https://www.sheltercluster.org/>):

- A woman who gives birth as a result of rape and other crimes against chastity even without a final conviction of the offender.
- A woman left with the sole responsibility of parenthood with the death of spouse
- A woman left with the sole responsibility of parenthood while the spouse is detained or is service sentencing for a crime for at least a year
- A woman left with the sole responsibility of parenthood due to the physical and/or mental incapacity of the spouse
- A woman left with the sole responsibility of parenthood due to legal separation from spouse for at least a year
- A woman left with the sole responsibility of parenthood due to abandonment of spouse for at least a year
- A woman taking the head of the household as result of the abandonment or death of parents.

4. Internally displaced persons due to the Gorkha Earthquake 2015, but now has resettled at the working Gaupalikas

- Those households who have moved from the other locations before the earthquake and are living unofficially in the project location will not be considered IDPs for this evidence phase.
- PHASE Nepal will use the definition and criteria provisioned in NRA official document for the purpose of data collection and project target identification for IDPs.

5. Food Insecure: Poverty Alleviation Fund defined poor households as the households whose food grain production from self-operated land, and wage earnings are sufficient to meet the food requirement of the family for less than a year.

- 'Ka' or 'Hard-core - Poor' for food sufficiency of less than 3 months,
- 'Kha' or 'Medium-Poor' for food sufficiency of 3 to 6 months,
- 'Ga' or 'Poor' for food sufficiency of 6 to 12 months,
- 'Gha' or 'Non-Poor' for food sufficiency of more than a year.

PHASE Nepal has marked "ultra-poor" for those households whose food sufficiency is less than 3 months ("Hard-core-Poor").
